Expression in Salmonella cells allows prodn. of live vaccine. HArepl-4 can also be used to detect the presence of anti-P. gingivalis antibodies and to raise monoclonal antibodies for diagnostic appln. (Updated on 16-OCT-2003 to standardise OS field) |

This sequence is encoded by a Porphyromonas gingivalis gene of the invention. This sequence represents the hagA haemagglutinin protein. The polypeptides are used to produce antibodies to organisms associated with periodontal disease. The antibodies are also used in purification and identification procedures. The genes and polypeptides are used as vaccines against periodontal disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            361 MGGSPTPTDYTYTVYRDGTKIKEGLTETTFEEDGVATGNHEYCVEVKYTAGVSFKECVNV

                                                                                                                                                                      P. gingivalis 381 haemagglutinin hagA (AAR96030) was identified as the product of the hagA gene (AAT30654) isolated as an BCORV fragment of genomic DNA. The haemagglutinin, or portions of it (see also AAR96021-24), can be obtd. from transformed host cells and used as a vaccine to protect humans or animals against periodontal disease. Expression in Salmonella cells allows prodn. of a live vaccine. The haemagglutinin can also be used to detect the presence of anti-P. gingivalis antibodies and to raise monoclonal antibodies for diagnostic appin. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                           Porphyromonas gingivalis genes and proteins - used in the detection and vaccination against periodontal disease.

                                                                                                                                                                                                                                                                                             This sequence is encoded by a Porphyromonas gingivalis gene of the invention. This sequence represents the hagh haemagglutinin protein. The polypeptides are used to produce antibodies to organisms associated with periodontal disease. The antibodies are also used in purification and identification procedures. The genes and polypeptides are used as vaccines against periodontal disease

It forms part of haemagglutinin hagA (see also AAR96030). HArep2 and other hagA repeat unit products (see also AAR96021 and AAR96023-24) can be obtd. from transformed host cells and used as vaccines to protect humans or animals against periodontal disease. Expression in Salmonella cells allows product. P. gingivalis antibodies and to raise monoclonal antibodies for diagnostic appln. (Updated on 16-0CT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              126

It forms part of haemaggluttinin hagA, (see also AAR36030). HARED3 and other hagA repeat unit products (see also AAR36021-22 and AAR96024) can be obtd. from transformed host cells and used as vaccines to protect humans or animals against periodontal disease. Expression in Salmonella cells allows product of live vaccine. HARED1-4 can also be used to detect the presence of anti-P. gingivalis antibodies and to raise monoclonal antibodies for diagnostic appln. (Updated on 16-OCT-2003 to standardise OS field)

This sequence represents the hagA haemagglutinin protein. The polypeptides are used to produce antibodies to organisms associated with periodontal disease. The antibodies are also used in purification and identification procedures. The genes and polypeptides are used as vaccines against periodontal disease

HARPEP4 (AAR96024) is the product of the HARPEP4 repeat unit (AAM30648) of the hagA gene (AAM30654) of P. gingivalis 318. It forms part of the hagA gene (AAM30654) by the hagA gene (AAM30654) by the hagA gene hagA (see also AAM96030). HARPEP4 and other hagA repeat unit products (see also AAM96031-23) can be obtd. from transformed host cells and used as vaccines to protect humans or animals against periodontal disease. Expression in Salmonella cells allows prodn. of live vaccine. HARPEP1-4 can also be used to detect the presence of anti-P. gingivalis antibodies and to raise monoclonal antibodies for diagnostic appln. (Updated on 16-OCT-2003 to standardise OS field)
                                used in the detection and

This sequence represents the hagA haemagglutinin protein. The polypeptides are used to produce antibodies to organisms associated with periodontal disease. The antibodies to organisms associated with identification procedures. The genes and polypeptides are used as vaccines against periodontal disease.

P. gingivalis 381 haemagglutinin hagE (AAR96033) was identified as the product of a gene (AAT30656) identified in P. gingivalis 318 genomic DNA. The haemagglutinin can be obtd. from transformed host cells and used as a vaccine to protect humans or animals against periodontal disease. Bapression in Salmonella cells allows prodn. of a live vaccine. The mamagglutinin can also be used to detect the presence of anti-P. gingivalis antibodies and to raise monoclonal antibodies for diagnostic appln. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      239
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      359

AG (AG-2) were isolated from P. gingivalis strains H66 (ATCC 33277) and W50 (ATCC 53973). The sequences of the proteins were used to design PCR primers and probes to isolate AG DNA. Lambda DASH and lambda ZAP libraries were screened with a probe based on amino acids 11-22 of the AG protein to obtain DNA encoding AG-1 (AAQB3484) and AG-2 (AAQB3489). AG-2 is a prepolyprotein incorporating AG-1. (Updated on 25-WAR-2003 to correct PN field.)

This sequence represents the hagE haemagglutinin protein. The polypeptides are used to produce antibodies to organisms associated with periodontal disease. The antibodies are also used in purification and identification procedures. The genes and polypeptides are used as vaccines against periodontal disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Isolated Porphyromonas gingivalis genes - encoding haemagglutinin and/or

Porphyromonas gingivalis.

```
This sequence represents a Porphyromonas gingivalis arginine-specific proteinase known as Arg-gingipain/gingipain-2 amino acid sequence. Gingipain-2 consists or a 50kp protease component non-covalently associated with a 44kD haemagalutinin component. The proteinase is stimulated by glycine containing peptides and glycine analogues. It is inhibited by cysteine protease group specific inhibitors. The protease preparation can be used in immunosenic compositions and vaccines against inflammatory response and tissue damage caused by P. gingivalis in periodontal disease. It can also be used to screen for agents that modulate Arg-gingipain proteinase activity inhibitors

                                                                                                                                                                                                                                                                                  immunoglobulins, with a preference for Arg in P1, and hydrophobic residues in P2 and P3.

RENZYME REGULATION: Requires cysteine for activation and Ca(2+) and/or Mg(2+) for stabilization. It is stimulated by glycine-containing dispeptides. It is resistant to inhibition by proteinase inhibitors in human plasma.

SIMILARITY: Belongs to peptidase family C25.
FUNCTION: Thiol protease which is believed to participate in FUNCTION: Thiol protease which is believed to participate in intracellular degradation and turnover of proteins. Its proteolytic activity is a major factor in both periodontal tissue destruction and in bacterial host defense mechanisms. Activates complement C3 and C5.

CATALYTIC ACTIVITY: Cleavage of proteins, including collagens and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                24 TIDADGDGNNWTTTPPPPGGTSFAGHNSAICASSASYINFEGPONPDNYLVTPELSLPNGG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 84 TLIFWYCAQDANYASEHYAVYASSTG--NDASNFANALLEEVLTAKTVVTAPEAIRGTRV

-!- FUNCTION: ENDOHYDDLYSIS OF THE DI-ACETYLCHITOBIOSYL UNIT IN HIGH-MARNOSE GLYCOPEPTIDES AND GLYCOPROTEINS COWTAINING THE -[(MAN) 5 (GLCNAC) 2]-ASN STRUCTURE. ONE N-ACETYL-D-GLUCOSAMINE RESIDUE REMAINS ATTACHED TO THE PROTEIN; THE REST OF THE OLIGOSACCHARIDE IS RELEASED INTACT.
-!- CAPALYTIC ACTIVITY: Hydrolyzes the link between N-acetylmuramoyl residues and L-amino acid residues in certain bacterial cell-wall
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CATALYTIC ACTIVITY: Endohydrolysis of the di-N-acetylchitobiosyl unit in high-mannose glycopetides and glycoproteins containing the -[Man(GloMAC)2]Asn-structure. One N-acetyl-D-glucosamine residue remains attached to the protein; the rest of the oligosaccharide is released intact.
                                                                                                                                                                                                                      "A Staphylococcus aureus autolysin that has an N-acetylmuramoyl-L-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ACETYLMURAMOYL-L-ALANINE AMIDASE FAMILY 2.
SIMILARITY: IN THE C-TERMINAL SECTION, BELONGS TO FAMILY 73 OF

-!- CATALYTIC ACTIVITY: Pectin + N H(2)O = N methanol + pectate.
-!- SIMILARITY: Belongs to the pectinesterase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Aspergillus aculeatus.
